Julian Shalash

Data Scientist (Applied AI & Python Backend) · Dubai, UAE · +971 545 806 798 · Jolian.shalash.94@gmail.com
Portfolio: julianshalash.github.io · LinkedIn: linkedin.com/in/julian-shalash-907b66223
Python · FastAPI · LLMs / RAG · OpenAI API · TensorFlow · Azure · Docker · SQL · MongoDB

SUMMARY

Data Scientist with nearly 3 years of experience designing, building and deploying AI-powered applications into production, focused on applied AI and Python backend engineering. Ships LLM solutions (OpenAI API, prompt engineering, RAG, vector embeddings), machine learning models (TensorFlow, scikit-learn) and FastAPI services containerised with Docker on Microsoft Azure. Works with data, engineering and business teams to integrate AI into real workflows, and communicates trade-offs clearly to technical and non-technical stakeholders.

CORE SKILLS

Applied AI / ML: LLMs, OpenAI API, prompt engineering, RAG, vector embeddings, TensorFlow, scikit-learn, regression modelling, model evaluation (RMSE, MAE, precision/recall), reproducible training pipelines

Backend & Integration: Python, FastAPI, REST APIs, SQL, Microsoft SQL Server, MongoDB, Postman, Next.js

Cloud & DevOps: Microsoft Azure (Azure AI / Cognitive Services, Storage), Docker (containerisation), GitHub (version control & CI/CD workflows)

Data & Reporting: Pandas, NumPy, Jupyter Notebook, Power BI, Excel (Power Query), stakeholder presentations, requirements gathering

WORK EXPERIENCE

Data Scientist · Alpin Limited — Dubai, UAE *Dec 2023 – Present*

Own the full lifecycle of 4+ AI and ML projects, from data ingestion and feature engineering to production deployment and reporting, working with engineers and business stakeholders across internal and client-facing teams.

- **Deployed an interactive LLM-powered chatbot** (OpenAI API) into the production workflow, with users and chat history stored in SQL; custom prompt engineering and conversation context management let it answer domain-specific questions for ~100 users, reducing manual query resolution time and freeing the team to take on up to 10 new projects monthly.
- **Built a real-time multilingual AI translation service** on Microsoft Azure Cognitive Services with a FastAPI backend, preserving the source file structure and cutting translation time by up to 80%; in production use across internal and client-facing workflows.
- **Developing a full-stack Carbon Emission Intelligence Platform** (Next.js, FastAPI, SQL Server, MongoDB) with a RAG and vector-embeddings layer for intelligent querying and reporting; designed the data layer with 12+ MongoDB collections (document schemas) and 10+ relational SQL tables covering users, projects and companies. Currently in active development. *Architecture & security docs:* julianshalash.github.io
- **Engineered and launched a regression model** on 1,000+ industrial sensor records to predict equipment performance, using leakage checks, reproducible training and RMSE / MAE evaluation on held-out test data.
- **Designed dual-database pipelines** (SQL Server and MongoDB) with schema validation and standardised preprocessing, keeping structured and unstructured data consistent and trustworthy.
- **Containerised services with Docker for 4+ production projects** and managed reproducible workflows through GitHub, ensuring consistent deployments.
- **Built Power BI dashboards and Excel (Power Query) reports** that gave stakeholders accurate carbon-emission figures for decision-making, cutting decision time by up to 70-75%; explained model trade-offs (precision vs. recall) to non-technical teams.

CERTIFICATIONS & EDUCATION

TensorFlow Developer Certificate — DeepLearning.AI (Apr 2025)

Azure ML & MLOps — Udemy (May 2024)

Data Science Bootcamp — Udemy (Feb 2024)

IBM Data Analyst Professional — Coursera (Nov 2022)

MBA — Syrian Virtual University (2023)

B.Sc. Mechanical Engineering — Damascus University (2018)
